THOMAS G. BRUTON
CLERK, U.S. DISTRICT COURT

United States of America,

v.

Case No. 1:15-CR-00189

Gregory Salvi

Second Request For Compassionate Release

47 year old Defendant Gregory Salvi respectfully files his second request for Compassionate release under 18 U.S.C. section 3582(c)(1)(A) and U.S.S.G. section 1B1.13, Application Note 1(D) for "other extraordinary and compelling reasons warranting such a reduction" not presented in his initial request. In addition to the inclusion of updated BOP medical records to further solidify "extraordinary and compelling reasons", further service of

Salvi's Sentence within an overcrowded, unhygienic prison that has become a petri dish of COVID-19 infection where CDC mandated Social distancing is impossible renders his sentence to be now cruel and unusual.

As prisoners are five-times more likely to become infected with COVID-19 compared to the general public, American jails and prisons have become one of the deadliest environments on the planet. It is morally indefensible to continue to hold low-level, non-violent offenders like Salvi where continued exposure to a deadly virus coupled with his significant health issues could kill him. He therefore asks that this court grant his compassionate release request with the following question in mind:

If Salvi stood before the court today for Sentencing, would the court impose the same sentence in light of the COVID-19 global pandemic?

I. Extraordinary and Compelling Reasons

Salvi's conditions of confinement and the continued threat posed by COVID-19 exposure to his health has remained since the filing of his first compassionate release motion. He cannot social distance from the other 130 inmates in his crowded housing unit, remains locked-down next to them all day every day since April 1, 2020, and now has no access to hot water for hand washing or bathing.

Salvi now has current medical records from the BOP showing that he has COVID-19 risk-factors that are extraordinary and compelling reasons warranting release. See attached BOP medical records.

The most serious of these conditions that would cause him severe complications from COVID-19 is obesity. At 5'9" and 242lb, Salvi has a BMI (Body Mass Index) of 35.7. CDC guidelines state that any person with a BMI of 30 or greater is at a high risk of health complications from

COVID-19. With a BMI of 35.7, Salvi is well above that obesity threshold. He also has Reactive Airway Disease, commonly known as asthma. As COVID-19 specifically targets a person's respiratory function, this chronic condition is also a risk factor to Salvi. Salvi has a history of bronchitis, sinus infections, and pneumonia that show his susceptibility to respiratory infection. He also has hypertension, a CDC recognized moderate risk factor. He has hyperlipidemia and high cholesterol which are cardiovascular conditions adding to the complications he could suffer from COVID-19. He has chronic pain from multiple knee surgeries that add stress to his immune system, along with his long-term use of prescribed ibuprofen for that pain which can also have a negative impact on his immune system as well. Finally, Salvi suffers from hypogonadism, causing low testosterone levels, which is a major hormone responsible for the normal bodily function of the male physiology. At the least, this condition shows the ineptitude of the BOP medical care system in not recognizing the importance testosterone plays in the overall health of

its male inmates and to prescribe Salvi with the medication and treatment he needs to remain at his healthiest while incarcerated. At the worst, Salvi's prolonged condition of low testosterone, as the BOP is neglecting to treat him at all for it, has not only caused him undo bodily harm (andropause, weight gain, hair loss, mood swings, etc.), but has contributed to weakening his immune system.

Any one of these singular conditions could constitute extraordinary and compelling reasons, but collectively also satisfy the Defendant's burden to prove extraordinary and compelling reasons under 18 U.S.C. Section 3582 (c)(1)(A), applicable policy statements, and CDC guidelines.

II. 18 U.S.C Section 3553(a) Factors

Salvi will now weigh all section 3553(a) factors as they apply to his current circumstances in today's present motion:

"(a) The court shall impose a sentence sufficient, but not greater than necessary, to comply with the purposes set forth in paragraph (2) of this subsection;" Salvi's chronic medical conditions, under his current conditions of confinement, is now an insufficient sentence imposed and greater than necessary due to the threat to his health and safety that COVID-19 poses to him while incarcerated. This factor warrants release.

"(1) The nature and circumstances of the offense and the history and characteristics of the defendant;" Salvi, also pressured and threatened by CI1 and CI2, made a poor choice in judgement and engaged in a serious criminal offense that he has shown remorse for doing, and has accepted responsibility for that crime by pleading guilty. This is juxtaposed by his exemplary 20 plus year civil service history as an outstanding police officer and detective of the Melrose Park Police Department whose characteristics can be verified throughout that career, the love and strong ties of his family, and the community's support of him throughout the original

criminal proceedings. Coupled with the fact that Salvi is a non-violent, first-time offender with no criminal history, this factor favors release.

"(2) the need for the sentence imposed — " The need for a sentence imposed, under Salvi's current circumstances, should be altered due to COVID-19 and the threat it poses to his health while incarcerated.

"(A) to reflect the seriousness of the offense, to promote respect for the law, and to provide just punishment for the offense;" COVID-19 in the prison environment represents a threat to Salvi's health and safety that exceeds just punishment for the offense. Resentencing Salvi to time served or resentencing him to supervised release or probation would be a just punishment in these unprecedented times. Should Salvi be resentenced to a term of supervised release or probation, such a non-custodial sentence would also curtail prized liberty interests as he would always face the harsh consequences that await if he violates the conditions attached to such a sentence. A modification to Salvi's sentence, considering the risk COVID-19

presents to him, should be made that can still reflect the seriousness of the offense, promote respect for the law, provide just punishment for the offense, while also protecting his health and safety,

"(B) to afford adequate deterrence to criminal conduct;" Being a former law enforcement officer while incarcerated places Salvi's safety at particular risk. He is a vulnerable target from gang members, affiliates of those he has arrested, and frankly potentially the entire inmate population who for obvious reasons are anti-police in general. Salvi would not engage in criminal conduct if released and has been adequately deterred, having served a significant amount of time for a person who has never been incarcerated before, from doing anything that would return him to prison where he would face the day-to-day threat he faces today; especially in today's social climate about the police.

"(C) to protect the public from further crimes of the defendant;" As is evidenced by Salvi's two year home incarceration (not credited by the court as time served),

and that same faith the court placed on him to self-surrender to prison after sentencing, Salvi is not a danger to any person or the community. Because of these reasons, protecting the public from further crimes of the defendant should not be a concern. This factor favors release.

"(D) to provide the defendant with needed educational or vocational training, medical care, or other correctional treatment in the most effective manner; (3) the kinds of sentences available;" Under the granting of a compassionate release motion, which becomes a plenary resentencing, this court is authorized with the kinds of sentences that were not available at the original criminal proceeding. Resentencing Salvi to time served would provide the defendant with needed medical care that the BOP's burdened, understaffed system cannot provide while also allowing him to provide self care against the Coronavirus by social distancing at home. Also, 18 U.S.C. section 3582(c)(1)(A) says, "the court . . . may reduce the term of imprisonment (and impose a term of probation or supervised release with or without conditions that does not exceed the unserved portion of the

original term of imprisonment)...” Alternatively, the court can resentence Salvi to supervised release or probation, which would be the most effective manner of correctional treatment against COVID-19 possible. This factor warrants release.

“(6) the need to avoid unwarranted sentence disparities among defendants with similar records who have been found guilty of similar conduct;” It is reasonable to say that there are defendants with similar records who have been found guilty of similar conduct as Salvi being sentenced today. Unlike Salvi, those defendants with similar records are now sentenced with the consideration of COVID-19 in mind. This fact was unforeseen at the time of Salvi’s sentencing and, given his medical risk-factors to severe COVID-19 complications, the court would have taken that into account before imposing a sentence. This creates an unwarranted sentence disparity between Salvi and similarly situated defendants being sentenced today. Considering Salvi’s CDC guideline COVID-19 medical risk-factors, a reduced or modified sentence is warranted.

When these individual section 3553(a) factors are weighed in their totality, the balance of that scale favors release, or a modified sentence. It is without question that Salvi's crime was serious, as all criminal acts are serious violations of American law, but when weighed against all other section 3553(a) factors and the current pandemic as it relates to Salvi's health, the balance remains in favor of a modified sentence.

III. 18 U.S.C. section 3142(g): Danger To The Community

As stated above, Salvi presents no danger to others. He spent two years on home incarceration (a "release" that he was unaware that would not credit to any sentence imposed) for twenty-seven months without incident or revocation. Salvi was also allowed to remain released after sentencing, and self-surrendered to federal custody on the date he was expected to do so. There are also other factors to consider: he has strong family ties, a job waiting for him at Jidd Motors (the company who employed him after home incarceration), has been a member of the Melrose Park

community for 41 years, has many ties to that community, no prior criminal history beyond the instant offense, and made all required court appearances.

Considering the above stated facts, Salvi is clearly not a danger to any person or the community under section 342(g).

IV Conclusion

Wherefore, Salvi prays that this court will grant his motion for compassionate release and sentence him to time served, or, in the alternative, sentence him to a term of probation or supervised release with or without conditions that does not exceed the unserved portion of his original term of imprisonment, or resentence the Defendant to include the two years he spent locked-down under home incarceration at his parent-in-laws residence as authorized by the court under the "catch-all" provision of U.S.S.C. section 1B1.3 application note 1(D).

Verification

I hereby declare under the penalty of perjury that the above
stated factual assertions are true and correct to the best of my
knowledge and belief.

This 1st day of October, 2020
